DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1-22 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The specification fails to adequately convey what constitutes the invention. In particular, Page 6 Paragraph 0014, the invention is described as having a polarization system that outputs a single polarization light beam by converting one polarization to another. Such systems are common in the art. As best as can be understood, Paragraph 0017 appears to contradict Paragraph 0014 by implying that the output beam has spatially separated pairs of polarized beam. (Note that this paragraph is written in confusing language). Does the invention act to filter out residual polarizations?

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

4. Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Yamamoto et al.

Yamamoto et al. discloses a projection system comprising :

a light source (42)

polarization means (45) for mainly converting light to a single polarization;

color separation and combining means;

polarization separation means (54) for allowing light of one polarization to pass through while reflecting light of an orthogonal direction;

projection means (55).
